Topic	Question	Answer
1. What is the primary function of the heart?	What is the primary function of the heart?	The primary function of the heart is to pump blood throughout the body, delivering oxygen and nutrients to tissues and removing waste products.
	What is the primary function of the heart?	The primary function of the heart is to pump blood throughout the body, delivering oxygen and nutrients to tissues and removing waste products.
2. How does the heart maintain blood flow?	How does the heart maintain blood flow?	The heart maintains blood flow through the contraction of its muscular walls, creating a pressure gradient that drives blood through the circulatory system.
	How does the heart maintain blood flow?	The heart maintains blood flow through the contraction of its muscular walls, creating a pressure gradient that drives blood through the circulatory system.
3. What are the major blood vessels in the human body?	What are the major blood vessels in the human body?	The major blood vessels in the human body are the arteries, which carry oxygenated blood away from the heart; the veins, which carry deoxygenated blood back to the heart; and the capillaries, which facilitate the exchange of substances between the blood and tissues.
	What are the major blood vessels in the human body?	The major blood vessels in the human body are the arteries, which carry oxygenated blood away from the heart; the veins, which carry deoxygenated blood back to the heart; and the capillaries, which facilitate the exchange of substances between the blood and tissues.
4. How does the heart regulate blood pressure?	How does the heart regulate blood pressure?	The heart regulates blood pressure through the Frank-Starling mechanism, where the force of contraction is increased in response to increased volume, and through the release of hormones like angiotensin II, which causes vasoconstriction.
	How does the heart regulate blood pressure?	The heart regulates blood pressure through the Frank-Starling mechanism, where the force of contraction is increased in response to increased volume, and through the release of hormones like angiotensin II, which causes vasoconstriction.
5. What are the common causes of heart disease?	What are the common causes of heart disease?	The common causes of heart disease include atherosclerosis (buildup of plaque in the arteries), hypertension (high blood pressure), diabetes, and smoking, all of which can lead to the narrowing and hardening of the arteries.
	What are the common causes of heart disease?	The common causes of heart disease include atherosclerosis (buildup of plaque in the arteries), hypertension (high blood pressure), diabetes, and smoking, all of which can lead to the narrowing and hardening of the arteries.
