Question	Answer
1. What is the primary function of the cell membrane?	The primary function of the cell membrane is to act as a selective barrier, regulating the passage of substances in and out of the cell.
2. How does the cell membrane maintain its structure?	The cell membrane maintains its structure through the phospholipid bilayer, where hydrophilic heads face outward and hydrophobic tails face inward.
3. What are the components of the cell membrane?	The components of the cell membrane include phospholipids, proteins, and carbohydrates.
4. How do proteins in the cell membrane facilitate transport?	Proteins in the cell membrane facilitate transport through various mechanisms, including channel proteins, carrier proteins, and pumps.
5. What is the role of carbohydrates in the cell membrane?	Carbohydrates in the cell membrane are involved in cell recognition, signaling, and the formation of the glycocalyx.
